

# A comparison between the GREEN series and the MT4000 series

The first product of MT4000 series is listed in 2007. It has been over 10 years ago. More than a million products are sold to more than 40 countries and regions in the world. It serves many industries and has become a classic work based on the human machine interface of Linux platform. In the new era, we inherit the development experience of the more than 10 year professional human machine products and absorb the latest technological achievements of the semiconductor industry. Then we continue to innovate and launch a new generation of industrial human-machine interface - GREEN series.

The Green series is based on open Linux operating system and uses the CPU platform with over 10 years life cycle. After 1 recent year of market inspection at the user side, the products become more reliable,stable and have excellent performance, which is an ideal choice for seeking long-term stable and high quality human machine interface.
