About PHT Vertex Precision

As a major manufacturer of precise planetary gearboxes, **PHT Vertex Precision** offers the integral solution in the field of motion control application. Established in 1982 with the objective of producing the highest quality planetary gearboxes in the market, PHT Vertex Precision has achieved this goal with a new state of the art manufacturing facility. Utilizing the latest in machine tools and metrology equipment, PHT Vertex Precision is able to provide a high quality, competitiveness alternatives to that of the competition.

Through years' effort in the field of motion control application, for integrating the application of power transmission and linear motion, PHT Vertex Precision invested and established the factories of gear racks and rolled ball screws during the period of time from 2009 to 2012. The integral combination paved the way for PHT Vertex Precision of being a professional manufacturer who made a significant milestone during the developing history.

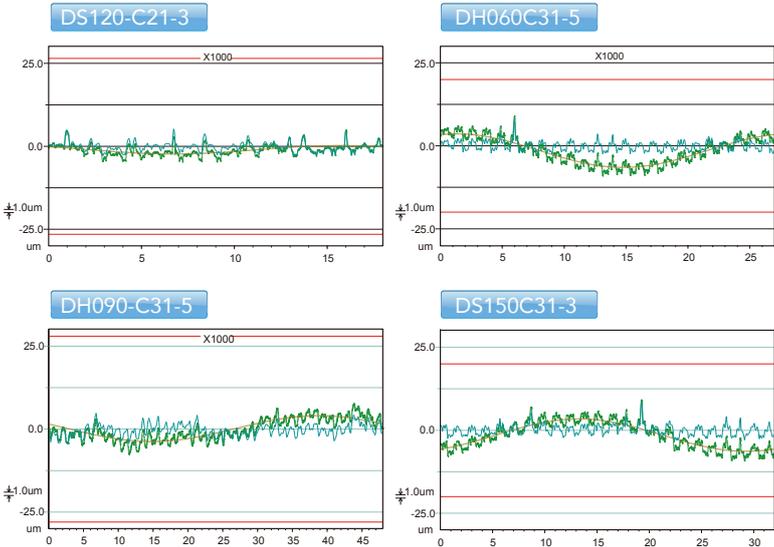

Now we have helped thousands of clients reach their full potential in the fields of Machines tools, Robotized Production Line, Conveyer System, Solar Energy, Industrial Print Machine, and so on. If you're looking for alternative and professional manufacturer with guaranteed products plus the advantages of competitiveness and compatibility for increasing products' added values, then, PHT Vertex Precision will be here for supporting you always.

What is Planetary Gearbox?

A planetary gearbox is a mechanical device consisting of sun gear, the planet gears, the planet gears' carrier, and the ring gear. Sun gear is located at the center that transmits torque to planet gears orbiting around the sun gear. Planet and sun gears are located inside the ring gear.

Multi-staged planetary gearbox is available by connecting the individual stage in sequence. With the gear unit combination the individual stage is sized to the torque requirement.

- > Sun Gear
- > Planet Gears
- > Planet Gears' Carrier (output shaft)
- > Internal Ring

Function of Planetary Gearbox

A planetary gearbox is a gear system utilized to increase the output torque and reduce load inertia while slowdown the speed.

A gearbox provides speed and torque conversions from a rotating power source to another device using gear ratio. It can be used in various situations, such as precise machine tools, and anywhere else mechanical equipment.

Advantage of Planetary Gearbox

Motor Adapter

Flexible Adapter Machined for diverse Motor Mounting with precisely Concentricity.

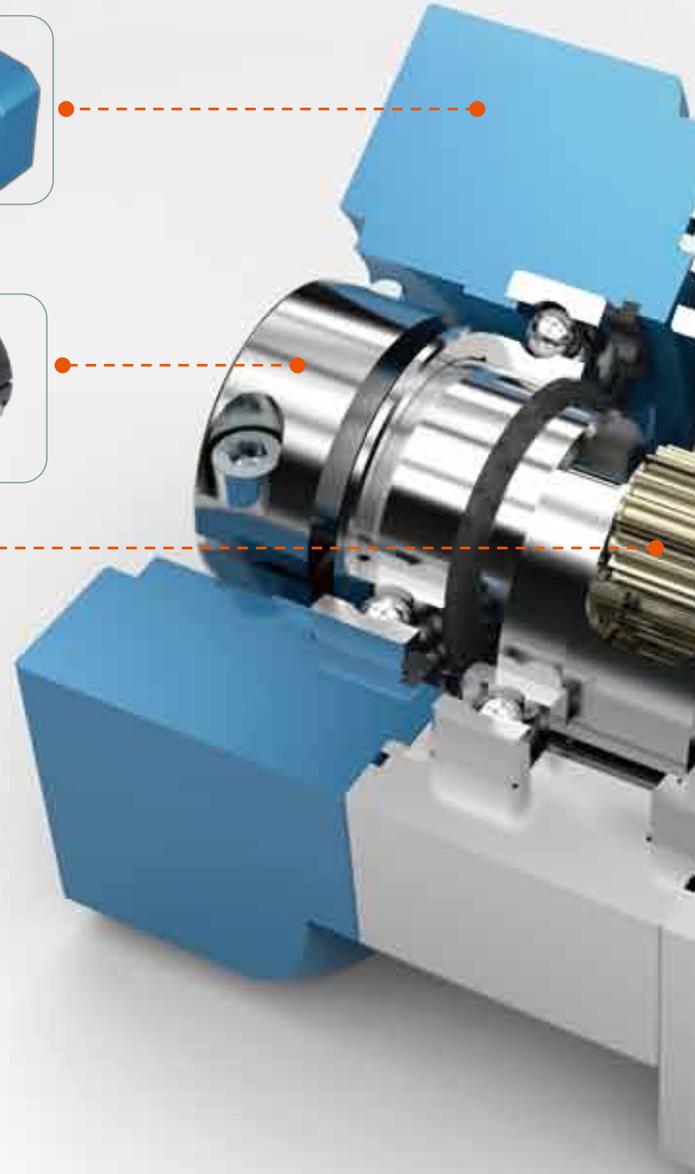

Input Clamping Unit

Collar Clamping Design made Output Shaft of Motor connected with Gearboxes accurately under high Speed Environment.

Planet Gears

Nitriding Heat Treatment Process for maintaining the Core Hardness and superior Wear Resistance.

Compact Size

PHT Vertex Precision planetary gear unit share a common axis which results in a structure of compact size than traditional device.

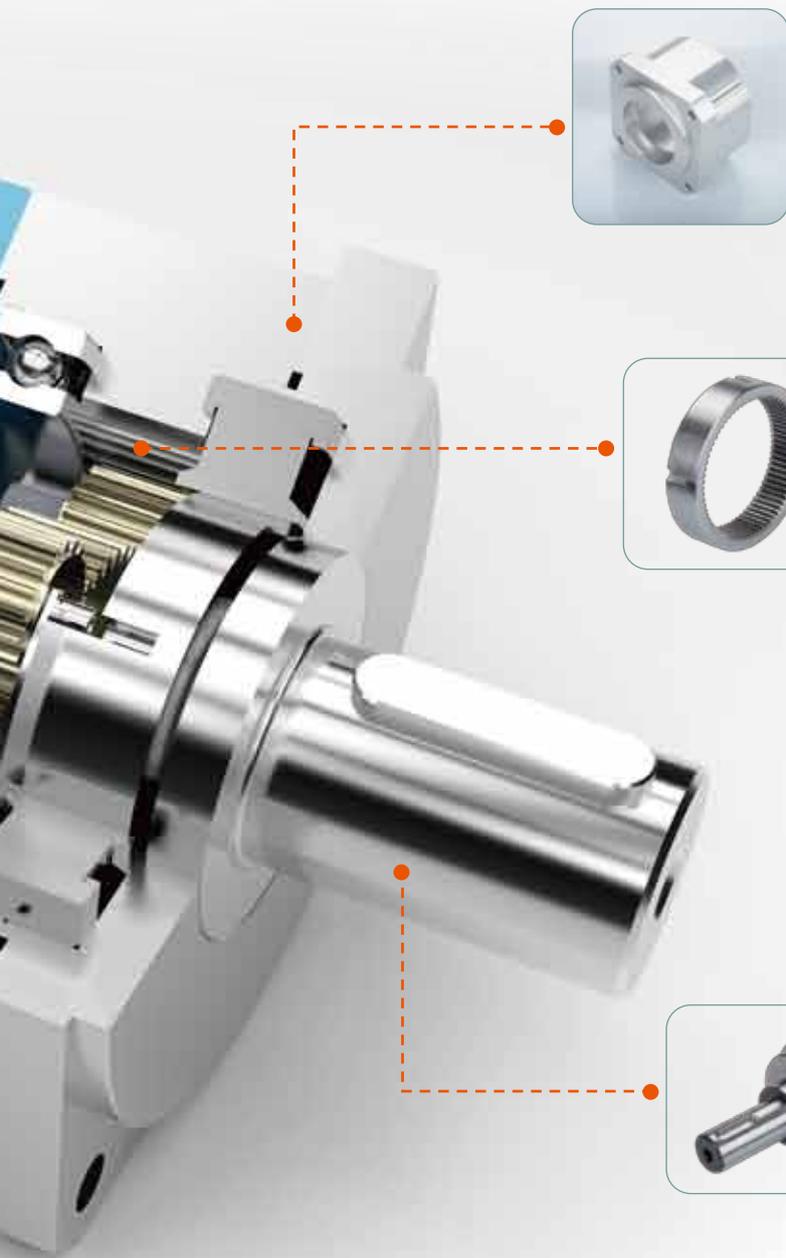

High Efficiency

Planet gears are in full and constant-meshed, eliminating the possibility of gear tooth damaged from gear clash or partial engagement. The full and constant-meshed feature also permits automatic and quick gear ratio changes without power flow interruption.

A typical efficiency loss in a planetary gearbox arrangement is only 3% per stage; this type of efficiency ensures that a high proportion of the energy being input in transmitted through the gearbox, rather than being wasted on mechanical losses inside the gearbox. Efficiency better than harmonics, can be over 90% in some cases.

High Radial Loads on Output Shaft

Planetary gears are strong and sturdy, which can handle larger torque loads, for the compact size, in comparison to

Gearbox Housing

High Thermal Dissipation by the Characteristic of material Aluminum for achieving Excellent Efficiency in the Field of Machine Tools.

Internal Ring Gear

Union-designed Internal Gear enhanced the Structure and Durability of Gearbox

Output Shaft with heat treatment

Union-Designed fixed Support of Planetary Gears and Output Shaft enhanced the Torsional Rigidity and Radial Capacity.

other gear combinations in manual transmissions. This is because that the torque load as it passes through the planetary set is distributed over the several planet pinion gears, which in effect allow more tooth contact area to handle the power transmission.

Higher Torque Density

Higher torque density, as well as greater load ability is obtained with more planet gears in the system.

Greater Stability

Due to the even distribution of mass and increased rotational stiffness, the arrangement of planetary gearbox also creates greater stability.

Cost Effective Precision

Competitive cost than other gearing options.

How to select a proper Planetary Gearbox?

How to select a proper Planetary Gearbox for meeting specific application requirement, following factors need to be considered:

Gear Ratio

Generally speaking, the reduction ratio can be simply explained by the formula: **Reduction Ratio = RPM-servo motor / RPM-gearbox output**

Gear ratio also can be defined as the correlation between the numbers of teeth of two different gears. Commonly, the number of teeth a gear has is proportional to its circumference. This means that the gear with a larger circumference will have more gear teeth, therefore, the relationship between the circumferences of the two gears can also give an accurate gear ratio.

Output Torque

Output torque is important parameter when choosing a planetary gearbox. Gear reduction reduces the relatively high rotational speed of motor, delivering a lower rotational speed at the output end.

Overload Torque

Peak overload torque is the short-term overloading of the permitted output torque.

Speed (rpm)

Speed is proportional to the gear ratio of the system. If the input gear has more teeth than the output gear, the result will be increase in speed at the output shaft. On the other hand, having the reverse scenario with more gear teeth at the output compared to the input will result in a decrease of speed at the output shaft. In general, the output speed can be determined by dividing the input speed by the gear ratio. The higher the ratio the lower the output speed will be and vice versa.

Backlash

Backlash is the angle in which the output shaft of a gearbox can rotate without the input shaft moving or the gap between the teeth of two adjacent gears. It is not necessary to consider backlash for applications which do not involve load reversals. If the motion cycle is exactly repeated the backlash of planetary gearbox has theoretically not influence on the repeatability. However, in precision applications with load reversals like Robotics, Automation, CNC Machines, etc., backlash is crucial for accuracy and positioning.

Choosing an applicable Reduction Ratio

Ideal Reduction Ratio

Reduction Ratio = RPM servo motor / RPM gearbox output

Calculation of required Torque

The lifetime of a planetary gearbox depends on calculation of required torque, also needs to be considered the peak torque happened in accelerating or decelerating should be less than the maximum load torque of a planetary gearbox.

$$TP = ((GD_L^2 + GD_a^2 + GD_M^2) N / (375 \times t) \pm T_L) / R$$

| | |
|---|--|
| <p>TP Min. torque required at moment of starting, that gear reducer should bear against peak torque at moment.</p> | <p>T_L The static torque of load reflected motor rotor. $T_L = \frac{T_{load}}{(R \times EFF) \text{ EFF} = \text{efficiency}}$</p> |
| <p>GD_M² Rotary inertia of motor rotor</p> | <p>t The time required in accelerate/decelerate.</p> |
| <p>GD_L² The rotary inertia of load reflected motor rotor.</p> | <p>N motor rotor speed RPM.</p> |
| <p>GD_a² Rotary inertia of gear reducer reflected to motor rotor.</p> | <p>+ Accelerating.</p> |
| <p>R Total reduction ratio. $R = \frac{RPM_{motor}}{RPM_{load}}$</p> | <p>- Decelerating.</p> |

Application of Planetary Gearbox

Planetary Gearbox is used on high precision motion control application that requires high torque, torsional stiffness and low backlash, specifics of which will vary by application.

higher, more efficient speed. The inertia reflects back to the motor is reduced for increased stability. Using a planetary gearbox allows machine builder using a smaller, less expensive motion control package.

Planetary Gearbox increases the torque by the stage of reduction ratio, making it possible to run the motor at a

The application of planetary gearbox covers the entire range of automation. It is frequently found in fields following:

- > Pick and Place Systems
- > Loading and unloading gantry Robots
- > Driving Rotary and Linear Actuators
- > Packaging Machines
- > Positioning Tables
- > Material Handling Systems
- > CNC Routers
- > Plasma Cutting Machines
- > Machine Tools
- > Industrial Conveyor
- > Industrial Printing Machines
- > Feeding Machines

1. The starting ratio of DM / DH042 is 1:4.
2. The starting ratio of DN series is 1:4. Reduction ratio of 1:9 can be supplied based by one(1) stage for DN series only.
3. Two(2) stages by reduction ration 1:100 can not be applied to high-speedy converse and reverse environment unless three(3) stages gearboxes.
4. Size-upgraded gearboxes are suggested to be used under the applications which need bigger "Mass Movement of Inertia".
5. Three(3) stages gearboxes are not within the scope of this chart; if the choice of three stages gearboxes is needed, please contact with our staff.

Planetary Gearboxes

Introduction

There're ten (10) different sizes available, from 1.7" to 8.66" (42 mm to 220 mm), within PHT Vertex Precision series Planetary Gearboxes. These can be used for any motors ranging from NEMA 23 to NEMA 42 or bigger than the ranges. The gears used in these planetary gearboxes offer you a reliable, economical choice for your motion control application.

There're eight (8) models can be chose for diverse fields of motion control applications. The choices let you select the appropriated backlash option for your application. Precision backlash is as low as 1 arc min maximum. We stock many ratios to match up to our wide range customers in worldwide market, and make a gearbox to fit any motor in as little as 7-10 working days or earlier. Ratios are available from 1:3 to 1:1000 with torque rating up to 10,488 in-lbs. (167,808 oz.-in)

DHseries

The planetary gearbox has been developed specifically for all application, which is an ideal alternative to our precision series.

| | |
|-------------------|---------------------------|
| Type: | DH series |
| Feature: | All-Purpose, Through Hole |
| Backlash: | 10 ~ 12 arc min |
| Size: | 42, 60, 80, 90, 120, 150 |
| Noise: | 64 ~ 65 dB |
| Life Time: | 20,000 hrs. |

DLseries

The planetary gearbox has been developed specifically for all application, which is an ideal alternative to our precision series.

| | |
|-------------------|--------------------------|
| Type: | DL series |
| Feature: | All-Purpose, Thread Hole |
| Backlash: | 10 ~ 12 arc min |
| Size: | 60, 90, 120, 150 |
| Noise: | 64 ~ 65 dB |
| Life Time: | 20,000 hrs. |

DNseries

DN series offer premium performance in terms of radial and axial forces. It combines high performance with low cost and compact size, excellent reliability, simple installation and free maintenance.

| | |
|-------------------|--------------------|
| Type: | DN series |
| Feature: | High Load Capacity |
| Backlash: | 10 ~ 12 arc min |
| Size: | 60, 80, 100 |
| Noise: | 64 ~ 65 dB |
| Life Time: | 20,000 hrs. |

DMseries

Reduced backlash, easy motor assembly, smooth operation, and integrated product configurations as standard options are the outstanding features of DM series.

| | |
|-------------------|------------------------------------|
| Type: | DM series |
| Feature: | Precision, Through Hole |
| Backlash: | 5 ~ 8 arc min |
| Size: | 42, 60, 70, 90, 120, 150, 180, 220 |
| Noise: | 64 ~ 65 dB |
| Life Time: | 20,000 hrs. |

DML_{series}

Reduced backlash, easy motor assembly, smooth operation, and integrated product configurations as standard options are the outstanding features of DML series.

| | |
|-------------------|--------------------------------|
| Type: | DML series |
| Feature: | Precision, Thread Hole |
| Backlash: | 5 ~ 8 arc min |
| Size: | 42, 60, 90, 120, 150, 180, 220 |
| Noise: | 64 ~ 65 dB |
| Life Time: | 20,000 hrs. |

DS_{series}

The DS series are designed for precision servo application with the characteristics of high thermal dissipation.

| | |
|-------------------|--------------------------------|
| Type: | DS series |
| Feature: | High Thermal Dissipation |
| Backlash: | 5 ~ 8 arc min |
| Size: | 60, 70, 90, 120, 150, 180, 220 |
| Noise: | 64 ~ 65 dB |
| Life Time: | 20,000 hrs. |

DA_{series}

The DA series provide you with a wide torque spectrum which is dedicated to high performance application where a combination of speed, precision and high-level duty cycle is required.

| | |
|-------------------|----------------|
| Type: | DA series |
| Feature: | High Precision |
| Backlash: | 1 ~ 7 arc min |
| Size: | 60, 90, 120 |
| Noise: | 64 ~ 65 dB |
| Life Time: | 20,000 hrs. |

DF_{series}

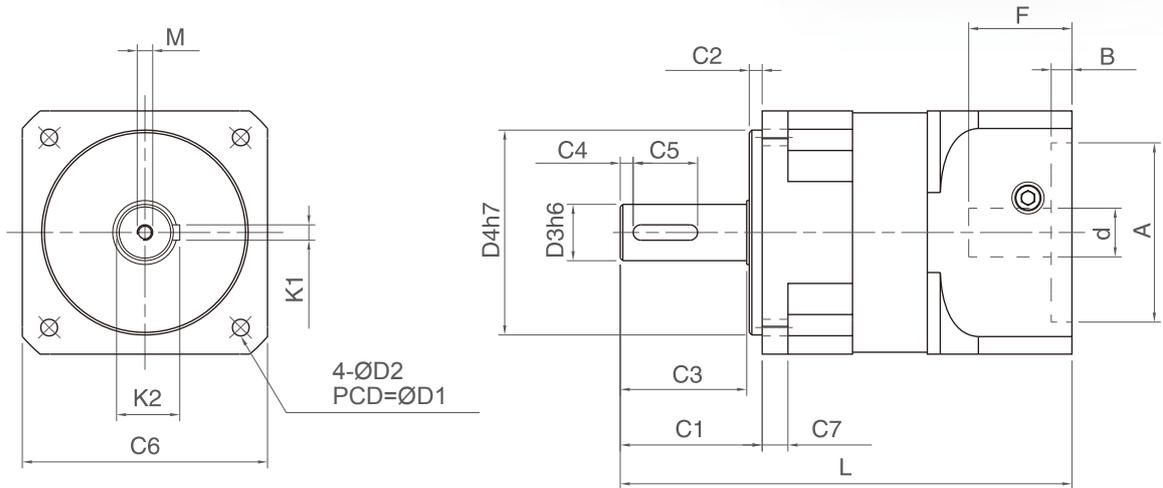

The rotating output flange allows machine elements such as pinion gears, pulleys, rotary index tables and transmission shafting to be easily connected directly to the output. These are ideal for motion control applications that require gearboxes to redirect the power flow.

| | |
|-------------------|------------------|
| Type: | DF series |
| Feature: | Flange Rotating |
| Backlash: | 5 ~ 8 arc min |
| Size: | 60, 90, 120, 150 |
| Noise: | 64 ~ 65 dB |
| Life Time: | 20,000 hrs. |

Right-Angle Planetary Gearboxes

Introduction

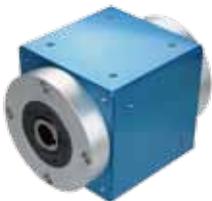

PHT Vertex Precision produces a complete range of right-angle planetary gearboxes, which offer a wide range of standard ratios and shaft options, for applications requiring high precision and space-saving installation.

Advantage of PHT Vertex Right-Angle Planetary Gearbox

- > High Thermal Dissipation
- > Low Backlash for Outstanding Repeatability
- > Flexible and customized Design for Motor Mounting
- > No Extra Lubrication by Unique Design on Seal
- > High Output Torque and Low Noise
- > Diverse combination with in-line planetary gearboxes

Modularity of Turning Unit

The modularity of turning unit supplies the convenience for customer to combine existed PHT Vertex in-line planetary gearbox, also reduces the burden of stock.

| RA-H | RA-S | RA-2S | RA-D | RA-F |
|---|---|---|--|---|
|  |  |  |  |  |

Right-Angle Planetary Gearbox - Precision

RAM-H_{series}

| | |
|-------------------|-------------------------------|
| Type: | RAM-H series |
| Feature: | Precision, Dual Hollow Shafts |
| Backlash: | 8 ~ 11 arc min |
| Size: | 60, 90, 120, 150 |
| Noise: | 65 dB |
| Life Time: | 20,000 hrs. |

RAM-Sseries

Type: RAM-S series
Feature: Precision, Single Solid Shaft
Backlash: 8 ~ 11 arc min
Size: 60, 90, 120, 150
Noise: 65 dB
Life Time: 20,000 hrs.

RAM-2Sseries

Type: RAM-2S series
Feature: Precision, Dual Solid Shafts
Backlash: 8 ~ 11 arc min
Size: 60, 90, 120, 150
Noise: 65 dB
Life Time: 20,000 hrs.

RAM-Dseries

Type: RAM-D series
Feature: Precision, Collar Clamp
Backlash: 8 ~ 11 arc min
Size: 60, 90, 120, 150
Noise: 65 dB
Life Time: 20,000 hrs.

RAM-Fseries

Type: RAM-F series
Feature: Precision, Flange Rotating
Backlash: 8 ~ 11 arc min
Size: 60, 90, 120, 150
Noise: 65 dB
Life Time: 20,000 hrs.

Right-Angle Planetary Gearbox - All-Purpose

RAH-H_{series}

Type: RAH-H series
Feature: All-Purpose, Dual Hollow Shafts
Backlash: 14~18 arc min
Size: 60, 90, 120, 150
Noise: 65 dB
Life Time: 20,000 hrs.

RAH-S_{series}

Type: RAH-S series
Feature: All-Purpose, Single Solid Shaft
Backlash: 14~18 arc min
Size: 60, 90, 120, 150
Noise: 65 dB
Life Time: 20,000 hrs.

RAH-2S_{series}

Type: RAH-2S series
Feature: All-Purpose, Dual Solid Shafts
Backlash: 14~18 arc min
Size: 60, 90, 120, 150
Noise: 65 dB
Life Time: 20,000 hrs.

RAH-D_{series}

Type: RAH-D series
Feature: All-Purpose, Collar Clamp
Backlash: 14~18 arc min
Size: 60, 90, 120, 150
Noise: 65 dB
Life Time: 20,000 hrs.

RAH-F_{series}

Type: RAH-F series
Feature: All-Purpose, Flange Rotating
Backlash: 14~18 arc min
Size: 60, 90, 120, 150
Noise: 65 dB
Life Time: 20,000 hrs.

8 ~ 11 ARC MIN
